- Indian Disaster Resource Network (IDRN)
- Key Features (IDRN)
- State wise IDRN Data
- Comparison of IDRN & SDRN

State Disaster Resource Network

BACKGROUND

GSDMA has initiated Disaster Risk Management (DRM) Programme in 11 most hazard prone districts of the state in first phase as a part of Nationwide DRM programme formulated by Ministry of Home Affairs GOI & UNDP.

It aims at strengthening the community, local self government and the state administration in their preparation to face disasters. The programme envisages disaster management planning at all the levels involving resources, hazard risk & response mechanism.

In order to achieve this objective, disaster preparedness and response plans are being formulated at all levels, the capacity of response groups and disaster management committees are being developed at all levels through orientation, training and awareness raising campaigns.

The activities under DRM include preparing for disasters and capacity building of stakeholders for better preparedness and response.

All the effort are aimed at building a self reliant society with reduced vulnerabilities to natural and man-made disasters through a societal habit of preparedness.

It has been observed that a comprehensive Database of Disaster Management related inventory is very essential for an organised response in case of a Disaster.

More often than not, lack of proper & adequate information has hampered swift and measured response resulting in delay which could be critical in such eventualities.

Therefore, need to prepare a database of such resources, from village to state level was strongly felt, and SDRN is an initiative to meet this necessity.

Amrish Panchal**

The information is collected through Village Disaster Management Plan (VDMP) format at Village level can collated through SDRN at Taluka level with Taluka level secondary data to produce the Taluka Disaster Management Plan (TDMP). These TDMPs would be aggregated to form a District Disaster Management Plan (DDMP). This centralized database system, SDRN and collects, stores and processes resource information and produces query based reports on:

- Resources available
- Vulnerable elements at risk
- Emergency contacts
- Disaster history
- Hazard profile

SDRN allows the creation and updating of the village, taluka, districts and State Disaster Management Plans at regular interval once the data has been collected at the Village level, entered into the SDRN system at the Taluka level and aggregated with secondary data pertaining to the specific Taluka or District. This system presents many advantages such as the easy availability of plans at all levels, minimum duplication, time saving and finally the visual data reports generation that assists in gap analysis and resource mobilization.

Screen Shot of State Disaster Resource Network application

KEY FEATURES

- Hazards Faced with intensities
- Data on Vulnerable Elements
- Information on Past Disasters
- Sector wise detailed Information
- Complete Resource Inventory
- Task Force and Disaster Management Committees at various administrative levels with their emergency contact nos.

UNIQUE FEATURES

- **Secured access**
 - Available only on the Gujarat State Wide Area Network [GSWAN], state owned intranet governed by S & T Department of GOG.
 - Authentication and permission for official users at various levels
- **Bi-lingual functionality**
 - SDRN is available in two versions, English and Gujarati, with a common database
- **Unique key: Census-2001 location codes**
 - This helps in integrating SDRN with other databases
 - It is compatible to IDRN [India Disaster Resource Network]

■ Data management

- Decentralized data entry [(Block) Taluka/District]
 - Centralized data processing [State]
 - Data entry status indicators
 - Generation of query based reports
 - Predefined
 - User defined
 - Multiple data source support
 - Query mode
 - Administrative unit wise
 - Sector wise
- Provision for linkage with available GIS platforms and 'Pragati', a low cost GIS (Geographic Information System) software package developed by Bhaskaracharya Institute for Space Applications and Geo-

-informatics (BISAG)

■ Off-line package of SDRN Database

- Stand alone application of 'Disaster resource inventory viewer' is being Developed and will be provided to all relevant Govt. offices for seamless information flow at time of emergency

ACHIEVEMENTS

- Major districts & Block(Taluka) officials are trained on SDRN
- Trainings have been also imparted to different hierarchy of Govt officials via Govt Training Institute like Sardar Patel Institute of Public Administration
- For 18253 i.e. 98% village level information has been entered into the system.
- Taluka level data entry has been started.

DATA CHECKING & RECTIFICATION

The following fields needs to be thoroughly checked:

- Male, Female Population
- Literacy Rate
- Health infrastructure, facilities and manpower
- Communication infrastructure, facilities
- Search and rescue equipments
- Contact details (District / Taluka / DMTs)

Steps taken for Rectification of data

- Village wise datasheets for Sectors like Demography, Health, Education & Communication have been checked for invalid data and

has been e-mailed to respective Districts.

- GoG officials and DRM Staff are being trained to correct data on the above basis.
- In district / Taluka Orientation meetings importance has been shown on data correction

OUTCOMES

- Making the process computerized will minimize human errors, avoid duplications, save time and other useful resources and speed up the process.
- Making system online will help in “Enter Once And See Anywhere” scenario.
- The Disaster Plans of village, (block) taluka, district will be easily available.
- Disaster prone areas can be easily identified and resource inventory of each and every village, (block) taluka, district can be easily available.
- The Visual, Data Report will help in decision support system, gap analysis and help in resource mobilization.

INFORMATION FLOW

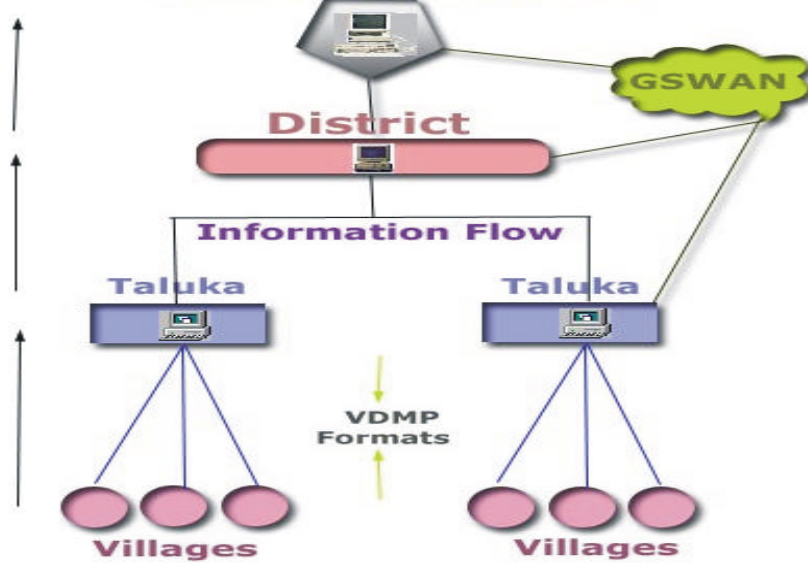

The data at the village level would be collected in the standard **Village Disaster Management Plan** data collection format. The data would be entered in computer at the each taluka via GSWAN. The Village level committee would approve VDMP's in the Gram Sabha.

The aggregated data, and the Other specific data which could be only gathered at taluka would be entered to SDRN system to develop **Taluka Disaster Management Plan.**

Similarly the aggregated and analytical data would be processed pertaining that district to develop **District Disaster Management Plan.**

INDIAN DISASTER RESOURCE NETWORK (IDRN)

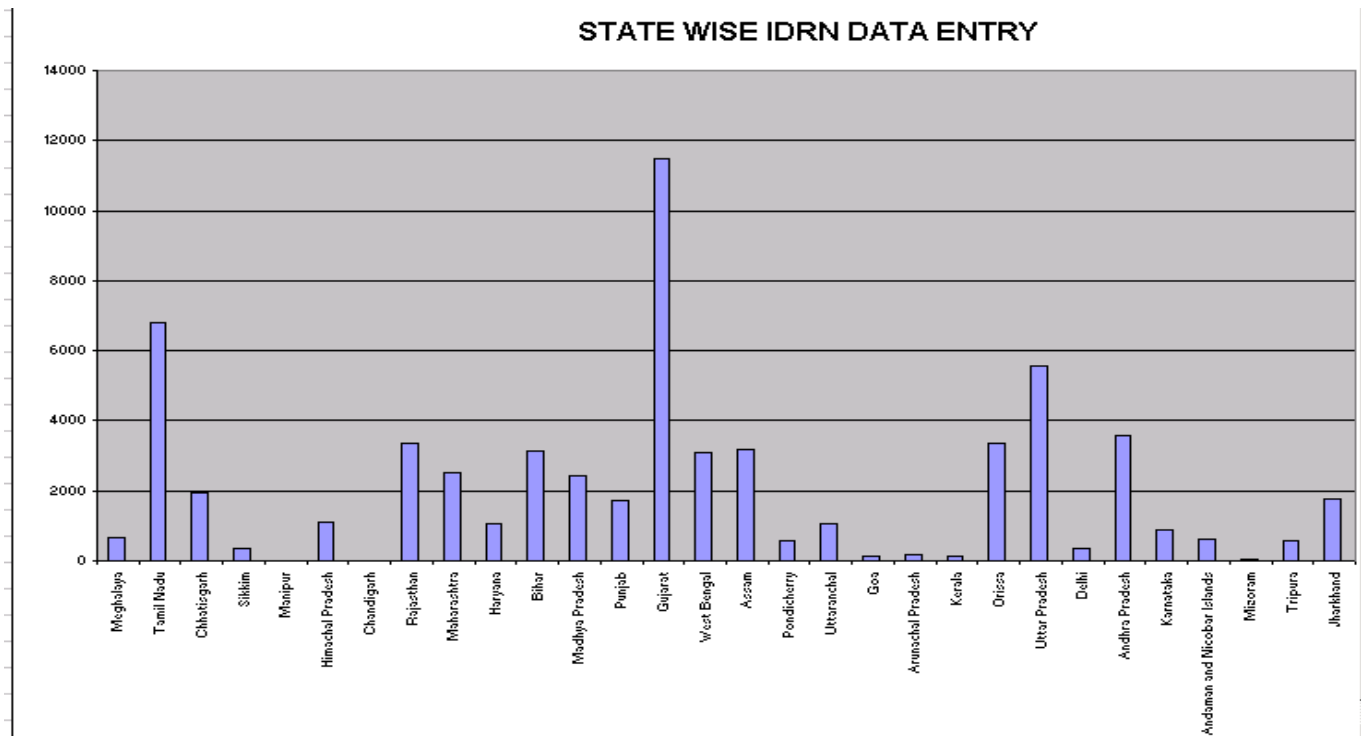

The Indian sub-continent has suffered enormous loss of lives, livelihoods and damage of public property due to its extreme vulnerabilities to natural calamities. Administrative authorities have faced problems in mobilizing equipments and skilled human resources to respond immediately to emergencies. There is an urgent need of compiled information of all available resources stored in a centralized database. To address this, Ministry of Home Affairs, GOI has launched IDRN as a national initiative under DRM Programme which is a web portal for collection and compilation of resource inventory for quick mobilization.

- To collect and collate information on 226 critical resources available in the country for emergency response.
- To enhance the decision making capabilities of Govt. functionaries in quick response to emergencies.
- A web based platform to share information on availability of equipments, skilled human resources, critical supplies, location and agency details through out the country.
- IDRN will be accessible by the Emergency Officers, District Collectors, Relief Commissioners and other disaster managers at various levels of Government.

<http://www.idrn.gov.in>

KEY FEATURES (IDRN)

- Decentralized inventory management: authorized data collection and entry, updating and control by District authorities.
- It allows queries for planning and decision making on mobilization of equipments, human resources and critical supplies.
- Database with multiple query options based on
- Activity, category, item and state, district for the country.
- Equipment & location.
- Critical supplies & location.
- Human resources & location.
- Item name & Item code.
- Authorized access protected by password.

IDRN

- 226 Critical Resources
- District is the unit of data collection
- Nationwide Accessibility to all govt officials Via Internet
- Query based Reports searchable starting from districts to different States of India

SDRN

- Village - State level Resources + DMP Resources
- Village is the unit of data collection
- Statewide Accessibility to all govt officials via GSWAN
- Query based Reports searchable starting from village to different districts of Gujarat

You can mitigate but not stop disasters so Prevention & Preparedness is better than Cure & Response
